QUALITY

EXPERTISE/PORTFOLIO

- ▶ Broad portfolio of drawbar assemblies

AN OVERVIEW OF YOUR BENEFITS:

- ▶ Excellent corrosion protection with cathoretic dip-coating (KTL_{Zn})
- ▶ Robust and long-lasting design for all components
- ▶ High level of availability and delivery performance
- ▶ Always the right solution for your needs
- ▶ Individual consultation

SAFE AND RELIABLE. RINGFEDER DRAWBAR ASSEMBLIES.

Drawbar assemblies form the link between the tractor unit and the trailer vehicle. These components are designed to continuously and reliably transfer all the relative forces between the towing vehicle and the trailer. This means they are some of the most safety-critical components on the whole commercial vehicle.

The choice of drawbar assembly depends on the tractor-trailer combination that is being used. The two main combinations are composed of a tractor unit with a centre axle drawbar trailer or a tractor unit with a multi-axle drawbar trailer and turntable steering. Ringfeder offers a complete range of drawbar assemblies for both combinations.

HOW A CENTRE AXLE DRAWBAR TRAILER WORKS:

These trailers have up to a maximum of three axles in the centre of the vehicle. A rigid drawbar on the vehicle frame forms the connection to the tractor unit. The central position of the axle(s) enables the trailer to be steered. The drawbar installation is described as 'rigid' because horizontal as well as vertical forces are transferred. As a static load, these forces are between min. 4% and max. 10% (or 2,000 kg) of the gross trailer weight. To improve the driving characteristics, centre axle drawbar trailers are coupled as low down as possible below the tractor unit.

Tractor unit with
centre axle draw-
bar trailer

SAFE

HOW A TURNTABLE DRAWBAR TRAILER WORKS:

The turntable drawbar trailer is steered using a separate pivot joint. For this purpose, the rigid front axle of the trailer is housed in the chassis so that it can be turned via a rotating frame with a turntable. The Ringfeder product range includes double-row turntables for this purpose, which offer an impressive level

of high quality and a long service life. The drawbar and the associated height-adjustment devices are attached to the turntable frame. This equipment is available in various versions and can be coupled low down like rigid drawbars.

Tractor unit with
turntable drawbar
trailer

Configuration of drawbar assemblies in accordance with ECE Regulation No. 55

The most important characteristic values for drawbar assemblies in accordance with ECE Regulation No. 55 are calculated as follows:

The V value must be determined in combinations of vehicles with a centre axle drawbar trailer and is defined as the theoretical reference force for the vertical component of the drawbar force between the towing vehicle and the centre axle drawbar trailer (unit of measure: kN).

The maximum permissible V values are declared for Ringfeder drawbar assemblies such as hitch

blocks and rigid drawbars. The smallest V value of all drawbar assemblies used in a vehicle combination is decisive.

Mechanical drawbar assemblies that transfer drawbar loads (such as rigid drawbars and hitch blocks in centre axle drawbar trailers) must be marked with a maximum permissible Dc value.

Mechanical drawbar assemblies that cannot transfer drawbar loads (such as drawbars and hitch blocks on turntable drawbar trailers) must be marked with a maximum D value.

The V value can be calculated using the vehicle data:

X = Length of the loading area of the trailer (m)

L = Theoretically free drawbar length

a = Vertical acceleration at the coupling point

1.8 m/s² for towing vehicles with air suspension

2.4 m/s² for towing vehicles with other suspension

C = Gross weight of the trailer (t)

$$V \text{ (kN)} = \frac{a \cdot C \cdot X^2}{L^2}$$

The Dc value can be calculated as follows:

T = Permissible gross weight of the towing vehicle (t)

C = Axle load (t) of the loaded centre axle drawbar trailer when coupled

g = 9.81 m/s²

$$Dc \text{ (kN)} = \frac{g \cdot T \cdot C}{T + C}$$

The D value can be calculated as follows:

T = Permissible gross weight of the towing vehicle (t)

R = Permissible gross mass of the turntable drawbar trailer (t)

g = 9.81 m/s²

$$D \text{ (kN)} = \frac{g \cdot T \cdot C}{T + R}$$

Example calculation for the configuration of a centre axle tractor/trailer combination

Permissible gross weight of the towing vehicle T = 22,000 kg

Vertical acceleration of the towing vehicle with air suspension a = 1.8 m/s²

Drawbar load S = 1,000 kg

Permissible gross weight of the trailer C = 18,000 kg

Length of the loading area of the trailer X = 7,820 mm

Theoretically free drawbar length L = 6,555 mm

Free drawbar length FL = 2,300 mm

The Ringfeder ZD 18 rigid drawbar (V max. = 54.0 kN/Dc = 110 kN) and the Ringfeder AB 75 hitch block (V min. = 75 kN/Dc = 130 kN) are sufficient for this case.

We would be happy to calculate the V and Dc values for your vehicle combination on request so that the appropriate Ringfeder drawbar assembly Ringfeder rigid drawbar and Ringfeder hitch block) can be selected.

$$V = \left\{ \frac{X}{L} \right\}^2 \cdot a \cdot C$$

$$V = \left\{ \frac{7,820 \text{ mm}}{6,555 \text{ mm}} \right\}^2 \cdot 1.8 \text{ m/s}^2 \cdot 18,000 \text{ kg}$$

$$V = 46,112 \text{ N} = 46.1 \text{ kN}$$

$$D_c = \left\{ \frac{T \cdot C}{T + C} \right\} \cdot 9.81 \text{ m/s}^2$$

$$D_c = \left\{ \frac{22 \cdot 18}{22 + 18} \right\} \cdot 9.81 \text{ m/s}^2$$

$$D_c = 97.12 \text{ kN}$$

For assembly on the trailer. Rigid drawbars from Ringfeder.

The Ringfeder rigid drawbar is a drawbar installation for centre axle drawbar trailers that is installed on the vehicle frame of the trailer. It is designed for centre axle drawbar trailers with a permissible gross weight of 6 to 24 t

and provides a reliable drawbar assembly for conventional transport.

The rigid drawbar is connected to the vehicle frame and forms the link to the tractor unit. In addition to tractive and braking forces (horizontal forces), it also transfers part of the gross trailer weight to the tractor unit via the drawbar load and also the dynamic drawbar load during braking (vertical forces).

RINGFEDER RIGID DRAWBARS – FEATURES AND BENEFITS

- For centre axle drawbar trailers with a permissible gross weight of 6 to 24 t
- Drawbar load up to 2,500 kg
- Various versions are available:
 - Rigid, length-adjustable or height-adjustable
 - Different towing eye types
 - Special versions for higher tonnages
- With ECE approval or individual certificate
- Treated with zinc phosphate, with cataphoretic dip-coating (KTL_{zn})
- Expert advice and calculation of characteristic values (e.g. for optimum matching of the Ringfeder hitch block and the Ringfeder rigid drawbar)
- High level of corrosion resistance due to galvanised inner tubes in drawbars with variable length

Ringfeder rigid drawbars up to 24,000 kg

ZD series, rigid

(ECE approval)

In addition to the standard dimensions shown in the tables below, the following options are also available on request:

- ▶ Special versions with a higher V value
- ▶ Use of other towing eye types
- ▶ Other dimensions

Please see the data sheet on our website for further information.

Please note that the permissible Dc and V values of the rigid drawbar must be tailored to the desired towing eye and trailer coupling.

For use of other towing eye types, see page 28. For additional U-bolts, see page 14.

Ringfeder modular rigid drawbar up to 24,000 kg

ZDM 20 series, rigid, crossmembers bolted on

The ZDM 20 modular rigid drawbar consists of a rigid drawbar and two bolt-on crossmembers. With minimum supporting width (SW) of 1,100 mm, these can be bolted on every 50 mm.

The as-delivered condition is unmounted. Pre-assembled units are also available on request.

Use of the crossmembers in combination with other series is available on request. (See assembly and operating instructions.)

Crossmember set can be welded on on request.

If the brackets (front and rear) are delivered unassembled, they must be bolted on in accordance with the assembly and operating instructions (FL = in accordance with type plate). Characteristic values for rigid drawbar and brackets in accordance with drawbar type plate. The drawbar is only to be used with the brackets from Ringfeder.

Ringfeder rigid drawbars up to 18,000 kg

ZEQ series, height adjustable

(Individual certificate)

In addition to the standard dimensions shown in the tables below, the following options are also available on request:

- ▶ Special versions with a higher V value
- ▶ Use of other towing eye types
- ▶ Other dimensions

Please see the data sheet on our website for further information. Please note that the permissible Dc and V values of the rigid drawbar must be tailored to the desired towing eye and trailer coupling.

Ringfeder rigid drawbars up to 24,000 kg ZFL20 series, length adjustable

(ECE approval)

In addition to the standard dimensions shown in the tables below, the following options are also available on request:

- ▶ Adjustment up to 6 x 100/8 x 100 mm
- ▶ Special adjustment for through-loading operation
- ▶ Special versions with higher V value
- ▶ Use of other towing eye types
- ▶ Other dimensions

As standard, the length-adjustable Ringfeder ZFL20 rigid drawbar features handle adjustment of 4 x 100 mm. Pneumatic adjustment is available on request (can also be retrofitted). The stated V values are for the adjustment 0 mm (basic state) and 4 x 100 mm.

Please note that the permissible Dc and V values

of the rigid draw-bar must be tailored to the desired towing eye and trailer coupling.

Ringfeder modular rigid drawbars up to 24,000 kg

ZFL20 series, length adjustable with bolted crossmembers

(Individual certificate)

The rigid drawbars in the ZFL20 series can also be supplied as modular systems with crossmembers that can be bolted. With a minimum support width (SW) of 1,200 mm, the crossmembers can be bolted on every 50 mm.

The as-delivered condition is unmounted. Pre-assembled units are also available on request.

The stated V values are for the adjustment 0 mm (basic state) and 4 x 100 mm.

Please note that the permissible Dc and V values of the rigid drawbar must be tailored to the desired towing eye and trailer coupling.

Use of the crossmembers in combination with other series is available on request.

ZFLK series

ZFL series

ZD series with crossmembers

ZD series with crossmembers

The perfect combination for turntable drawbar trailers.

Drawbars from Ringfeder.

Ringfeder drawbars for turntable drawbar trailers with a permissible gross weight of 12 to 48 t form the perfect link between tractor units and trailers with turntable steering.

Ringfeder supplies all the versions that are

required in practice, such as straight or angled towing eyes, or with length adjustment and/or cranked. In addition to this, all Ringfeder standard drawbars have ECE approval and special versions are type approved.

Ringfeder supplies drawbars for turntable drawbar trailers in a wide range of versions.

RINGFEDER DRAWBARS – FEATURES AND BENEFITS

- For turntable drawbar trailers with a permissible gross weight of 12 to 48 t
- Common dimensions are available immediately
- With ECE approval or individual certificate
- Treated with zinc phosphate, with cataphoretic dip-coating (KTL_{Zn})
- High level of corrosion resistance due to galvanized towing bars on length-adjustable drawbars
- Various versions available:
 - With angled towing eye
 - With fixed centre tube
 - Straight or cranked
 - Length adjustable
 - With swivelling eye
 - With semi-automatic or pneumatic length adjustment
 - With low-maintenance silent bushes

RINGFEDER DRAWBARS UP TO 48,000 KG

TBZ SERIES MADE OF U NORMAL PROFILE

(ECE approval)

The TBZ 27 and 32 series have towing eyes with Ø 40 mm (DIN 74054-40A) as standard. All drawbars are also available with towing eyes Ø 50 mm (DIN 74053-50A). In all standard versions, the bearing eyes have plastic bushes. Other dimensions and towing eyes are available on request. Height adjustment devices from page 58.

³⁾ Also available on request with low-maintenance silent bush (see page 50). ⁴⁾ Available with towing eye type 56 (heavy-duty towing eye) and type VBG as standard.

⁵⁾ With Kronrohr block ⁶⁾ With Brass bush.

RINGFEDER DRAWBARS – GENERAL INFORMATION

TOWING EYES AND BUSHES

With its range of drawbars, Ringfeder offers a comprehensive modular system that enables individual combinations. Below is an overview of the Ringfeder standard product range.

RINGFEDER TOWING EYES:

Screw-in towing eyes type BNA
29.05922
D value = 200 kN

Towing eye type NATO VG-74059
D value = 125 kN

Towing eye: version for Switzerland
D value = 168 kN

Screw-in towing eyes type NATO VG-74059
D value = 125 kN

Towing eye VBG 15-173
D value = 190 kN

Towing eye VBG 16-0895
D value = 190 kN

Screw-in towing eyes DIN 74054-40B
Optionally DIN 74053-50B
D value = 125 kN

Towing eye in accordance with DIN 74053-50A
D value = 130 kN
Optionally towing eye type 56 similar to DIN 74053-50A
D value = 260 kN

Towing eye similar to DIN 74054-40A
With profile shaft
Optionally towing eye DIN 74054-40A
D value = 125 kN

RINGFEDER BUSHES:

Spring bolt E11 (pair)
2x 09.801.98.18.0

Drawbar hanger (pair)
2x 02.1004.22.00

Shown with silent bush

Plastic bush

Brass bush

Silent bush

The dimensions for the bearing eye bushes can be found in the technical data sheets.

Ringfeder height adjustment devices

Klemmfix 72

(General type approval (German ABE))

The galvanized Klemmfix 72 is a height-adjustment device for drawbar installations that can swivel vertically.

With the optimum setting, the towing eye can be adjusted freely from the horizontal position by at least 300 mm (measured at the towing eye) upwards and downwards. The drawbar installation can be set to the required height by a single person without the need for tools or other assistance. Without a height support device, the Klemmfix 72 can only be used for limited height

adjustment. For a drawbar weight of more than 75 kg, a height support device (e.g. return spring with clamp lock or spring washers) must also be fitted, which will take some of the weight of the drawbar (see diagram). See the assembly and operation instructions for further information.

Ringfeder NO.:

Klemmfix 72/Z (tension) 51.98.01.0013

Klemmfix 72/D (compression) 51.98.01.0014

Klemmfix 72/Z

Klemmfix 72/D

Drawbar hanger

Installation of Klemmfix 72/Z, effective under tension
Please read the installation and operating instructions.

Installation of Klemmfix 72/D, effective under compression
Please read the installation and operating instructions.

Connection of Klemmfix on longitudinal or cross strut

Ringfeder height support device

Compression spring pack

The galvanized compression spring pack are used only as a height support device for Klemmfix 72. The spring washers and Klemmfix 72 work together to enable optimum height adjustment. The spring washers must not be used alone to adjust the height of drawbars.

Ringfeder NO.:
Compression spring pack 51.98.03.0001

Ringfeder height support device

Return spring with turnbuckle

The return spring with turnbuckle can be used directly as a height adjustment device. The height is adjusted by turning the turnbuckle. The return spring used means that it is usually sufficient to use one return spring even for heavy drawbars (see diagram). In combination with Klemmfix 72, the return spring with turnbuckle is also used as a height support device.

Ringfeder NO.:

Return spring
(cataphoretic dip-coating – KTL_{Zn}) with turnbuckle
09.801.03.18.0

Return spring (galvanized) with turnbuckle
09.801.03.83.0

Return spring with turnbuckle
as height adjustment device

Return spring with turnbuckle
as height support device

Important:
Note the turnbuckle
installation diagram.

Installation of the return spring with turnbuckle on the drawbar

Ringfeder height adjustment and support devices

Choosing the products you need

To select which products are required for height adjustment for the drawbar that is being used, you need the following information:

1. Drawbar length (mm)
2. Drawbar weight (kg)

The following combinations can be selected using the diagram:

COMBINATION	HEIGHT ADJUSTMENT DEVICE	HEIGHT SUPPORT DEVICE
1.	Klemmfix 72 ¹⁾	-
2.	A return spring	-
3.	Klemmfix 72	A return spring
4.	A return spring	A return spring
5.	Klemmfix 72	Spring washers

¹⁾ Can only be used alone for drawbars up to 75 kg

Sample reading:

Drawbar: PZM L=3,000 mm m=103 kg

The diagram above shows the combination options 3, 4 and 5 (see table).
